PROFESSIONAL SUMMARY

Associate Software Engineer with hands-on experience in Data Engineering support, ETL Testing, and Data Validation at Accenture. Experienced in validating end-to-end data pipelines, executing ETL workflows, performing data quality checks, and ensuring data integrity using SQL, Google BigQuery, Excel, WinSCP, and PuTTY. Proficient in writing SQL queries, analyzing large datasets, defect tracking, and collaborating with cross-functional teams in Agile environments. Strong foundation in Python, Data Warehousing, ETL concepts, and Database Management Systems, seeking to contribute to scalable data pipeline development, data validation, and cloud-based data engineering solutions..

SKILLS

- **Programming Languages:** Python(Pandas, NumPy), SQL
- **Databases & Data Warehousing:** Google BigQuery, PostgreSQL, MySQL, DBMS, Git and Github, Linux/Unix commands
- **Data Engineering:** ETL Testing, Data Validation, Data Quality Checks, Data Warehousing, Data Pipeline Validation,DAG Monitoring, File Validation, Data Loading Validation
- **Testing & QA:** Test Case Execution, Test Planning, Defect Management
- **Tools & Platforms:** Google BigQuery, Excel, WinSCP, PuTTY
- **Core Concepts:** Data Cleaning, Data Integrity, Data Transformation, Data Analysis, Statistics, Database Design

EXPERIENCE

Accenture | Associate Software Engineer

July 2025 – October 2025

Data Warehousing & ETL Training (4 Months)

Completed intensive training in Data Warehousing, ETL Testing, SQL, and Data Engineering fundamentals, gaining hands-on exposure to enterprise data engineering concepts and tools.

Data Tester | Enterprise Data Engineering Project

December 2025 - Present

Worked on enterprise-scale data validation and ETL testing for data warehouse pipelines, ensuring data accuracy, integrity, and successful end-to-end data processing.

Responsibilities

- Validated end-to-end ETL workflows and enterprise data pipelines.
- Executed SQL queries in Google BigQuery to perform source-to-target data validation.
- Performed data quality checks including record count, duplicate, NULL, schema, file, and reconciliation validation.
- Monitored Apache Airflow DAG executions and validated successful pipeline runs.

PROJECTS

Retail Sales Analysis using SQL on Superstore Dataset

- Executed comprehensive analysis of 10,000+ retail transactions in PostgreSQL, identifying top product categories contributing 35% of profits.
- Imported and cleaned multi-sheet Superstore dataset and built advanced SQL queries (joins, CTEs, window functions, subqueries) to uncover sales trends, customer behavior, and shipping patterns across 4 regions.
- Optimized query performance, reducing report generation time by 40% while delivering actionable business insights.

Exploratory Data Analysis on Superstore Dataset

- Conducted EDA on retail dataset with Python, uncovering sales patterns and regional insights across 3 customer segments.
- Executed comprehensive analysis of customer behavior, identifying loss-making segments, and category-wise trends using Pandas & NumPy.
- Built 8+ visualizations (Matplotlib, Seaborn) revealing seasonal trends and profit margins, after preprocessing data (missing values, duplicates, feature engineering) to ensure 100% quality.

EDUCATION

- B.Tech in Computer Science, Shri Ramdeobaba College of Engineering & Management, Nagpur (2021–2025)
- Class 12th – Kamala Nehru Mahavidyalaya, 2021
- Class 10th – St. Paul High School (CBSE), 2019
